

## SportREADERS Bi-focal Lenses

You'll need them, too...someday.

Not sure about you, but I'll admit... the ol' peepers just aren't what they used to be. Over the past few years, my ability to focus on things close-up has really gone south. Not long ago, I had to buy new sockets with the sizes etched in large numbers on the side, and I keep a big magnifying glass in my toolbox now. Then came the ultimate submission - *reading glasses* - but out on the trail, they're such a hassle!

A few months ago, you may have read the news release on SportREADERS bi-focal lenses for goggles in the World of Dirt feature here in GLTR. Suffering as I do, no one was more excited to try them out than I was.

SportREADERS are marketed by Dennis Lever, a fellow CCC member in Canada. The nearly invisible

The SportREADERS kit comes complete with everything you'll need to prep your goggle lens and install the diopters correctly the first time. It's amazing what a difference they make, and I had no difficulty adjusting to them on the fly. Even the finest detail on a route sheet was clearly visible. It was completely natural moving from long distance down the trail, to checking the ICO at a glance through the SportREADERS.

With SportREADERS lenses installed, they're barely visible. The special glue kept dust out from behind the diopters and they are easily removed when it's time to change goggle lenses. A custom molded storage case is part of the SportREADERS kit.

magnifying lenses attach to the inside of your goggle lens, miraculously restoring your failing close-up vision to adolescent sharpness all over again.

The magnifying lenses (technically, called "diopters") are roughly half the size of a fifty cent piece. Installing the diopters was simple, due mainly to the detailed instructions provided with each kit. A sealed container of special glue and a pair of individually wrapped tweezers made short work of the install. Depending upon your need, SportREADERS are available in +1.25, 1.50, 1.75, 2.00, 2.50 and +3.00 strengths. Best of all, they're easily removable, so you can use them on sunglasses, other goggles or whatever you choose. Visit [www.sportreaders.com](http://www.sportreaders.com) for ordering information. They work great! ■
